

FITNESS 50CM ANTI BURST PEANUT BALL

\$67.99

The ILS Physio anti-burst peanut-shaped massage ball is a great resource for movement therapy and simulation. The unique wide-saddle shape ensures that the ball will only move in one plane (rather than back and forth and side to side), allowing people to feel stable and have more control in their movements.

The anti-burst tool is used to help relieve pain, build mobility, and work on balance and core strength. It is suitable for people of all ages and fitness levels, and can aid women during pregnancy and child labour. Made of strong PVC material, it is durable and can be used in water.

SKU: S8952
